EDUCATION

Pasadena City College, *Associates in Computer Science*

Jun 2027

- **Relevant Coursework:** Programming in C++, Data Structures, Algorithms, Database Management
- **Extracurriculars:** AI&ML Club, SheCodes, Mate ROV

EXPERIENCE

Snap Inc, Software Engineering Scholar

Jun 2026 – Aug 2026

- Engineered responsive full-stack web and mobile applications with HTML, CSS, JavaScript, and React Native.
- Collaborated across engineering, design, and marketing teams to prototype and pitch a Snapchat feature, "SnapTalk".
- Coordinated 1:1 meetings with cross-dependent teams across Snap to expand domain knowledge on the product and team-dependencies.

MATE ROV, Software Engineer

Feb 2025 – Mar 2026

- Engineered ROV navigation and control software using C++ for an international underwater robotics competition.
- Collaborated with a cross-functional team to test control software and execute mission simulations.
- Improved system reliability and performance in a hardware-integrated environment.

Pasadena City College, Pre-Calculus Teaching Assistant

Feb 2026 – Jun 2026

- Provided in-classroom tutoring support for Pre-Calculus students, reinforced core mathematical concepts and problem-solving strategies.
- Worked directly alongside students during coursework to identify and address gaps in understanding, resulting in measurable improvements in student comprehension of course material.

AI & ML Club, Intern

Jan 2026 – Apr 2026

- Spearheaded event planning and logistics for a club focused on AI and machine learning, coordinating workshops, speaker sessions, and collaborative project showcases.
- Drove member engagement initiatives and managed outreach to grow club participation, fostering a community where students build hands-on AI/ML projects and develop industry-relevant skills.

PROJECTS

SnapTalk: Snap Feature | *React Native, OpenAI API, ElevenLabs API, Supabase*

Jul 2026

- Architected a real-time chat translation and video dubbing feature prototyped during the Snap Engineering Academy.
- Integrated the OpenAI API to execute rapid, multi-lingual text translation for incoming chat messages.
- Leveraged ElevenLabs AI to enable seamless video dubbing, allowing users to record video Snaps and send them with natural-sounding translated audio.
- Implemented Supabase to handle user authentication, enabling secure signup and login functionality for the application.
- Collaborated cross-functionally with UI/UX designers and product marketers to ensure the technical implementation aligned with an intuitive user experience.

Flappy Bird Clone | *C++, SFML*

Oct 2025

- Engineered a fully functional Flappy Bird game in C++ using the SFML graphics library, implementing real-time collision detection, physics-based movement, and a dynamic scoring system.
- Designed and managed the full game loop including sprite rendering, frame-rate control, and user input handling, demonstrating strong object-oriented programming and systems-level thinking.

TECHNICAL SKILLS

Languages: C++, JavaScript, JSX, Java, HTML, CSS

Developer Tools: VS Code, Git, GitHub, Postman, Jira, Command Line

Technologies/Frameworks: React, Node.js, Bootstrap, Material UI, Object-Oriented Programming
